Property donated to Isaiah House

By Brandon Mattingly
Sun Staff Writer

This house, once owned by Gary and Anita Johnson, was recently donated to the Isaiah House in Willisburg.

The women's facility at the Isaiah House was selected to be the only facility in the United States to do a trial on the device. It's just crazy, really,” he said. “We had a brain injury, and we know somebody at Stanford, who knows somebody in Scotland. It has since gained state approval in Scotland.”

The NeuroElectric Therapy (NET) device, LaPalme said the device was applied behind each ear of the patient, and sends small electrical signals to areas used on celebrants such as Peter Townsend and Mick Jagger, and has shown great improvement among Isaiah House residents.

The method was stumbled upon by a doctor in the 1990s who was doing work with people in recovery. In a face of drug misuse, the device makes brain activity to the way it was one face before, the patient's addiction is reduced.

As far as a craving, or even understanding the thought of using, the doctors say it can also make people think, ‘I thought thoughts that are completely gone to the side of the track, where my thoughts are on my family now, and my well-being.'
